

BFFR

Bicarb Pouches

THE NEXT EVOLUTION IN BICARB PERFORMANCE

Buffer Smarter. Perform Harder.

A buccal-delivery sodium bicarbonate pouch that eliminates GI distress and supercharges absorption designed for competitive runners.

Agenda

01 The Science

Bicarb performance data & lactate reduction

02 The Problem

GI distress, cost & competitor comparison

03 Our Solution

Buccal pouch delivery & product flavors

04 Market Opportunity

\$48.6B market & growth segmentation

05 Business Model

DTC model, pricing & unit economics

06 SWOT Analysis

Risks, mitigation & competitive position

07 Marketing Strategy

D2C, influencers & race expo channels

08 Our Ask

Operations & funding ask

09 Financial Projections

3-year forecast, break-even & costs

THE TEAM

The Founders

Jonas Weschle | CEO

Mechanical Engineering
Product Vision , Marketing, D2C Infrastructure

Niko Angell | CFO

Accounting Major
Unit Economics, Fundraising, capital allocation

Ethan Kimmel | CSO

Chemical Engineering, Chemistry, & Pre-Med
Research & Development , Product Safety

THE SCIENCE

The impact of sodium bicarbonate ingestion on muscle metabolism

Lactate Levels With and Without Bicarb

Average decrease in Lactate Levels:

25.8% ± 1.1%

Relative Performance Enhancement:

3% ± 1.2%

THE PROBLEM

Features	Raw Bicarb	Maurten	BFFR Pouches
Distress Risk	High	Reduced	None
Ease of Use	Complex Dosing	Proposed but requires assembly	Simple
Lead Time	60-180 min	90-120 min	45-60 min
Cost Per Use	<\$0.01	\$17	\$5-6
Portability	Messy and difficult to transport	Large bowl and needs water	Pocket size and discrete

OUR SOLUTION

BFFR Bicarb Pouches

A buccal-delivery snus-style pouch placed under the lip delivering sodium bicarbonate directly into the bloodstream, bypassing the stomach entirely.

1

Place the Pouch

Athlete tucks a small pouch under the upper or lower lip,

Similar to snus or nicotine pouch, 45–60 min before exercise.

2

Buccal Absorption

Bicarb dissolves and absorbs directly through the gums, no GI tract involved.

3

Buffer & Perform

Bicarb lowers blood acidity allowing more lactate to be produced.

Athletes push harder, longer, without stomach risk.

✓ No stomach issues. No waiting. No GI risk. Faster onset. Lower cost.

MARKET OPPORTUNITY

\$48.6B

Global sports nutrition
market (2025)

9.25%

Annual market
growth rate (CAGR)

Market Segmentation

Total sports supplement market

\$48.6B

According to Yahoo Finance, this is the market for endurance sports nutrition in 2024.

BFFR's Total Forecasted Market

\$2–4B

High-intensity track, middle/long distance runners, cyclists, and combat sports athletes where bicarb is most effective. Competitive amateur to elite.

Estimated Current Bicarb Market

\$5–20M

U.S. competitive runners and athletes seeking a GI-safe, affordable bicarb alternative. Direct-to-consumer and specialty running shops.

FLAVORS

BFFR
Bicarb Pouches

Supplement Facts:

Serving Size: 1 Pouch per 5 kg of body weight

Amount Per Serving	% Daily Value*	
Niacin (as Niacinamide)	8mg	50%
Vitamin B6 (as Pyridoxine Hydrochloride)	0.85mg	50%
Vitamin B12 (as Cyanocobalamin)	1.8mcg	75%
Sodium	1000mg	43%
Chromium (as Chromium Picolinate)	17.5mcg	50%
Natural Caffeine (from Green Coffee Beans)	100mg	**

*Percent Daily Values are based on a 2,000 calorie diet

** Daily Value not established

Ingredients: Sodium Bicarbonate (as 1g per serving), Tropical Flavor Blend (Contains: Sugar, Starch, Citric Acid, Pectin, Natural Tropical Fruit Flavors, Sunflower Lecithin), Microcrystalline, Natural Flavors, Sodium Citrate, Citric Acid, Sucralose, Water, Silicon Dioxide, MCT Oil, Sorbitol, Propylene Glycol, Polysorbate 80, L-Theanine.

BUSINESS MODEL

Direct-to-consumer Business Model

Endurance Athletes

- High School and College track and field middle distance athletes
- Sprint specialists and track cyclists
- Rowers and cross-country

~450,000 Mid Distance Athletes

Weightlifters

- Helps with extended and longer training sessions
- Market towards sports that lift often, like football
- It is estimated that 15-30% of serious weightlifters are already using a stimulant pouches (familiar form factor)

Hybrid Athletes

- Bicarb has not yet been marketed to hybrid athletes, and they are perfect subjects for this
- 779,000 Hyrox athletes competed in 39 events
- From 2017 to 2025 Hyrox has grown 111,000%

Current Unit Economics

COGS per pouch	\$2.02 per unit	Bicarb, pouch material, packaging, contract manufacturing
Retail price per pouch	\$6 for single unit	\$20 for a 4 Units
Gross margin	66.33%	Comparable to supplement industry benchmarks
Subscription price	~\$15/month	3-Cans monthly subscription; builds recurring revenue

RISKS & MITIGATION

Scientific Uncertainty

MEDIUM

MITIGATION:

More research required to optimize product,

FDA Regulation

LOW-MED

MITIGATION:

No pre-market approval required. We follow GMP guidelines and include clear labeling. Similar to NRT nicotine pouches which are OTC.

Market Education

MEDIUM

MITIGATION:

Athletes may be skeptical of a novel delivery route. We invest in content marketing, athlete partnerships, and share pilot study results to build credibility. The nicotine pouch analogy helps.

Competition Response

LOW

MITIGATION:

Maurten is expensive and VC-backed with no buccal products. Other bicarb supplements are still pills/powder. Our format is novel and fast to defend with IP and first-mover brand recognition.

Manufacturing Quality

LOW-MED

MITIGATION:

Partner with an established oral pouch contract manufacturer (same industry as nicotine pouches). Require GMP certification and batch testing for consistency and safety.

Internal Pros and Cons

Strength

Novel Delivery Format of Bicarb

Faster onset and smoother experience

Brand aesthetic advantage

Low manufacturing complexity

Weakness

Not yet 3rd party tested

Limited brand trust

Limited Production Challenges

Need to re-educate past users on how to take

External Pros and Cons

Opportunities

- Massive growth towards new markets like lifters and Hyrox

- Partnerships with influencers and college athletes

- Expansion into different flavors and ingredients

- International markets (Nordic Skiers)

Threats

- Regulatory scrutiny (outside of US)

- Topical bicarb products could improve and get better

- Taste rejection due to saltiness

- Supply chain volatility (overseas raw materials)

MARKETING STRATEGY

Digital Native Branding & Influencer Partnerships

Targeting young athletes via Instagram/TikTok ads and micro-influencers in the CrossFit, Track, and Hybrid-athlete niches.

Experiential Marketing (Race Expos)

Establishing a high visibility presence at venues and elite race expos to offer "on-site" education and trial samples.

The Science of Performance

Using data from our UND Kinesiology pilot study to scientifically proof effectiveness

Direct to Consumer (D2C) Focus

Direct to customer sales, cut out middlemen, recurring revenue through subscription.
